OUR SPECIALIZATION

aws competency Data & Analytics Partner Solutions

As an AWS Partner with the Big Data Competency, we have achieved a high level of requirements such as evidencing our deep technical knowledge and/or consulting experience helping companies to evaluate and use tools, techniques, and Big Data technologies in a productive way with AWS.

This means that we have the knowledge, capability and tools necessary to help your organization to get the most out of its Big Data workloads in AWS.

Data Lake solutions

Data Warehouse solutions

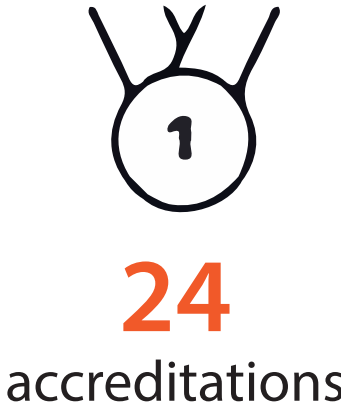

Data Analytics solutions

OUR TEAM

OUR MOST VALUABLE ASSET

AGILE AND COLLABORATIVE MODEL

Client focus | Value delivery
Adaptation to change | Short time between cycles

We apply a project management model based on transparency and constant communication, where early deliveries allow us to meet the true needs of our clients, ensuring the quality and success of our services.

THINK BIG. TURN DATA INTO YOUR BEST ASSET.

 Solutions designed and implemented by our Certified Architects.

 Large-scale storage at low cost.

 Extract and manage your data according to your analytic model.

 Amazon Elastic MapReduce (EMR) based on Hadoop to process large amounts of data.

 Integrate with the main data analysis frameworks such as Spark.

 Use Amazon Redshift to speed up the large-scale management and analysis of data.

 Integrate with the main data analysis frameworks such as Spark.

 Market Intelligence.

ARTIFICIAL INTELLIGENCE THAT TRANSFORMS THE BUSINESS OF OUR CLIENTS

Our Machine Learning solutions make your processes more efficient. We can predict, simulate and offer recommendations in real time, based on state-of-the-art techniques.

 Classification and segmentation of pictures and videos.

 Voice recognition.

 Natural language comprehension.

 Recommendations engine.

 Predictive modelling.

 Churn rate.

 Text analysis: sentiment analysis.

 Clients segmentation.

 Prediction of demand.

 Client support – Chatbot.

 Content customization.

RIMAC DATA LAKE

Problem: The company had a large and very heavy workload for its data and analysis processes, all of which were performed using on-premise servers.

Solution: Using modern services and tools the on-premise data processing and analysis workload was migrated to the AWS cloud, delivering a world-class platform to process and store data.

NOVIS SALES FORECASTS

Problem: Many clients face the challenge of obtaining reliable sales forecasts for multiple locations on a large set of different products.

Solution: A recurrent neuronal network algorithm (DeepAR) was implemented, supported by the fully managed service Sagemaker.

The output corresponds to a probabilistic distribution of predictions for each one of the forecasted time series, which facilitates the management and optimization of the relationship between stockout and overstock.

VOICE OF THE CUSTOMERS

“Morris & Opazo has adapted to our needs, ensuring quality and professionalism in providing the services.”
(Aguas Nuevas S.A., Chile).

“Morris & Opazo allowed us to integrate faster with AWS tools, facilitating and optimizing even more all our ERP processes.” (Defontana, Chile).

“SIM is getting the most out of Cloud Technologies for Big Data and Analytics thanks to Morris & Opazo”
(SIM Partners - Chicago, IL).
